

iGrafX with future-proof Windows Support Offering

~ Provider of process analysis solutions ensures continuity across Windows based applications ~

February 24th, 2009 - iGrafX is experiencing a growing level of interest for its process modelling and analysis software within the BPM community driven primarily by the current economic climate where many organisations are assessing their process and enterprise management solutions very closely.

Against this backdrop, users are also keeping a close eye on future development of Windows based systems, which are competing against Java oriented applications. They fear the withdrawal of support for their Windows solutions and the potential costs faced when forced to migrate from Windows to java based applications. However, iGrafX is delighted to confirm its continued and full support of the Windows platform for its entire family of products.

Due to the increasingly integrated nature of different business IT systems, questions over the sustainability of systems and future support is of growing significance with more and more organisations seeking 'extendable' solutions. They are looking at how they can add value to their existing capabilities of modelling or simulating operations. For example, the ability to model both enterprise-wide and cross-enterprise dependencies whilst mapping business controls to measure and monitor performance KPI's and business / operational risks.

iGrafX offers a comprehensive and extendable suite of process excellence

solutions for all these areas, which enable organisations to document, analyse, optimise and manage single processes up through to the enterprise level. With several interfaces and converters available it is also possible to create a bi-directional data feed from all standard systems.

“We will never force anybody to switch to Java. Windows will remain an important standard for business applications. No vendor should leave their customers out-in-the-cold, by dropping support for Windows” states Armin Trautner, Managing Director EMEA of iGrafx.

Users will find further information about the comprehensive support program at www.igrafx.co.uk/support/index.html.

About iGrafx:

iGrafx is a leading provider of process analysis solutions that help organisations achieve competitive advantage through **process excellence**. iGrafx solutions help organisations reduce costs, waste and risk by allowing IT, business analysts and process initiative practitioners to understand and improve their processes across functional boundaries. The iGrafx suite of business process improvement software allows users to document, analyse, refine and communicate processes in the pursuit of corporate goals and objectives. Whether complying with regulations, aligning business activities with IT, or implementing Six Sigma or Lean, iGrafx establishes and manages the process information that will ensure your success. By creating a collaborative process mapping and analysis environment, iGrafx links initiatives with the implementation environment for measurable productivity improvements. iGrafx is positioned by Gartner in the Leaders Quadrant in the Business Process Analysis Magic Quadrant in their 2H08 – 1H09 Magic Quadrant for Business Process Analysis Tools report. iGrafx, a division of Corel.
